5	UT-NWS	William	51% Confine 49% Full Supp	2 mi S of Santaquin, UT	5,832	0	98%	10/03/20	Type 3 IMT Mike Erickson	0	0	1	0	1	71	None	Minimal threat to private properties, structures, energy infrastructures and I-15 and 132 corridor, watersheds and culinary water systems in fire area.

Great Basin Priority Summary - Based on Most Recent 209's
9/29/2020

[illegible]

Evening Brief

Date: Tuesday September 29th, 2020

Weather Summary

This week will be characterized by a significant warming/drying trend, as an unusually strong high-pressure ridge along the West Coast will build eastward across the Great Basin, continuing through this coming weekend, and likely beyond. Afternoon temperatures will be 5-10 degrees above normal, along with afternoon humidity levels ranging from 7-15% across the southern half of the Great Basin, and 16-23% across most northern areas. Fortunately, no significant winds, or lightning are expected during the next 7 days.

An unusually strong high-pressure ridge along the West Coast will build eastward across the Great Basin starting today and continuing into the entire week. Afternoon temperatures will be 5-10 degrees above normal, along with afternoon humidity levels ranging from 10-17% across the southern half of the Great Basin, and 17-23% across northern areas. Fortunately, no significant winds, or lightning is expected during this time.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 9 fires for 1.7 acres. 75 acres Large Fire Growth

Fuels/Fire Potential

*** Fuel and Fire Behavior Advisory Remains in Effect for Parts of Idaho, Eastern and southern Nevada into Utah ***

Recent moisture and cool temperatures across northern and eastern areas has raised fuel moisture significantly across the mountains of Idaho and Western Wyoming, where ERC's have rapidly fallen back to near late September normals. However, the continuation of above normal temperatures and very dry conditions will bring about more rapid drying of fuels across all areas of the Great Basin. Fuels in the southern half of the Great Basin could once again reach near record level dryness. Fuels in northern areas could approach critical levels again by this weekend.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

Resources:

Aviation within the Great Basin

- 1 VLAT(OOS), 2 LATs, 0 CL-415
- 22 SEATs, 3 FB, 10 AA, 1 ASM, 0 LP
- 11 Type 1 Helicopters / 11 Comm.
- 9 Type 2 Helicopters / 7 Comm.
- 20 Type 3 Helicopters / 15 Comm.

Crews Committed within the Great Basin

- 9 IHCs / 0 Available
- 13 Type 2IA / 1 Available
